

# Physiotherapy & Sports

Tecartherapy - Diathermy

## C 50

### Manual Tecartherapy

Electrical Transference of Capacitive and Resistive Energy (1 channel)

CE  
0120

#### Therapeutic Possibilities

Capacitive - CAP  
Isolated

Resistive - RES

- **Frequency Selection:** Yes. In need of therapy: 0.8 MHz. 1 MHz. 1.2MHz.
- **Number of Channels Available:** 1
- **Intelligent Channel:** Yes. The same channel allows you to use the manual capacitive and resistive handprobe.
- **Multichannel Technology:** No.
- **Automatic Technology:** No.
- **Option of Crossfires (manual CAP-RES combined application):** No
- **Option of Combined Manual & Automatic Treatments:** No.
- **Option of Bilateral Lymphatic Drainage --unattended--:** No.
- **Temperature Monitoring by Sensor:** No.
- **Suggestions of Treatment by Guided Program:** Yes. (Athermal. Thermal. Highly thermal).
- **Basic or Advanced Screen:** Yes.
- **Viewing Biofeedback Parameters (absorbed energy , qualitative indication of real-time power, coupling), to conduct clinical research:** Yes.
- **Safety Switch:** Yes.
- **Hygiene Systems for Accessories:** Yes: Protective membranes for manual capacitive handpieces.

#### Technical Features

- **Upgrade:** No.
  - **Power:** 310 W channel\*
  - **Weight:** 10,7 Kg
  - **Measurements:** 34,7 x 42 x 22 cm
  - **Includes Footstand:** No.
- Environmental conditions*
- **Temperature:** 68°F - 77 °F
  - **Relative Humidity:** <80%

\* power established in laboratory on resistive load of 400 ohms.

The most important electromedical innovation of the last decades

Second Generation Tecartherapy
